SKILLS

React, Redux, Ruby, Rails, Javascript, Node, HTML5, CSS, SASS, SQL, PostgreSQL, jQuery, Git, Github, Webpack, Canvas, MongoDB, AWS S3, C++

PROJECTS

INSTAPLACES PROJECT   (Ruby on Rails, AWS S3, HTML, SASS)   live | github

This project is a pixel-perfect tribute of instagram application which has a CRUD cycle for posts, likes, and comments.

- Used Ruby on Rails for creating tables, models, and controllers for the backend with the process of making a user authentication. AWS S3 was deployed for storing images of all the posts the user has created as well as their profile image.
- On the frontend side of this project, React / Redux associated with HTML and SASS was used for creating the forms partnered with specific containers for each one of them. Jbuilder and ajax were also implemented to connect my frontend and backend.

MERN STACK PROJECT   (MongoDB, ExpressJS, ReactJS, NodeJS)   live | github

This project is a budgeting app where users can input their monthly/annual income and expenses with different types of it.

- Applied Express and Node JS at the backend of this project. A user authentication was utilized and connects them to mongo database. This is also where requests from the frontend and return a specific response based on the request happened.
- React JS, HTML, and SASS were used on the frontend and axios for connecting frontend and backend and doing a specific action such as get, post, patch, and delete.
- Experience in using React JS components , forms, events, keys, router concept

JAVASCRIPT PROJECT   (JAVASCRIPT, UnderscoreJS)   live | github

This project is an integrated single player game where a user can better speed on typing.

- Canvas is the base of this project. This project is almost made out of javascript canvas.
- This project is mostly javascript where all the actions happened, from having all the words stored in an array, pulling one word at a time, having those words comes down from the top of the screen, to having a conditional statement checking whether the input of the user matches with any of the words that showed up on the screen.

EXPERIENCE

Production Associate

Tesla, INC   Jan 2017 - Aug 2019

- Trusted of all the supervisors because of the work ethic shown.
- Moved to a department where engineers of different types are working, this is a very good opportunity to whoever is picked on this position because of the extra effort that you have to put in into this task aside from being a regular task on the production line.

Logistics Specialist

Amazon   Aug 2014 - Aug 2016

- Awarded three times within a year as an associate of the month out of more than 100 associates.
- Became an ambassador after a few months of employment.
- Promoted to be a logistics specialist after 1 year after being noticed by the manager himself.
